

Product Guide

Regulatory Risk Under Control

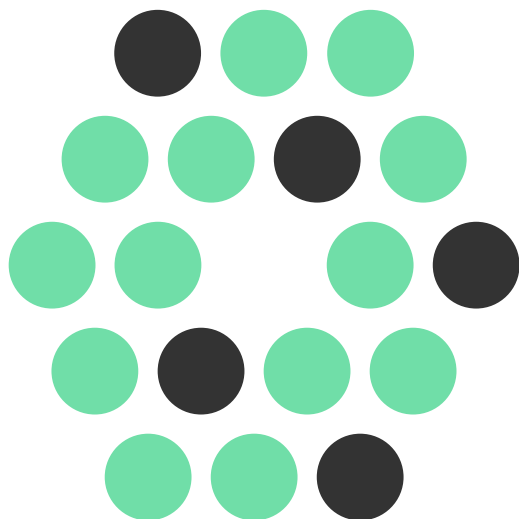

hivera transforms how Financial Services firms manage their unstructured data, helping them bring regulatory risk under control.

Through our cloud first solution, we help firms see the risk in their unstructured data, automate their governance strategy to regulatory standards and demonstrate quantifiable compliance to auditors.

hivera.ai

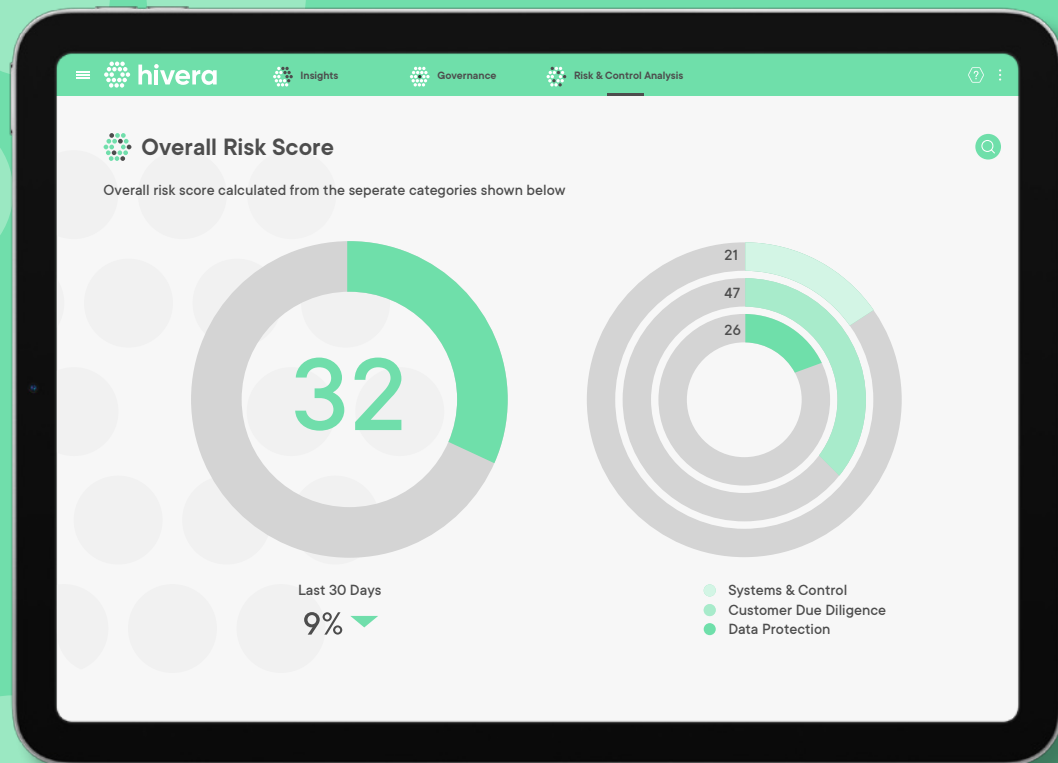

Regulatory Compliance

hivera provides a real-time regulatory risk score for your unstructured data, scoring data against regulatory requirements using our unique analysis methodology and mitigating it with the application of compliance policies to reduce and remove risk.

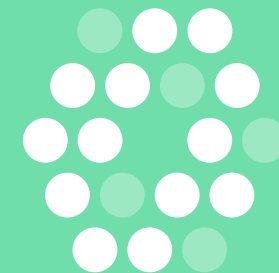

Compliance policies are the requirements that financial services firms must meet. Failure to comply introduces the risk of legal action, financial fines and imposed service restrictions. Through a unique risk score framework, hivera analyses your entire unstructured data estate and maps it with your information governance strategy and regulatory requirements. It will score your risk level across all regulatory requirements and track it over time.

hivera brings visibility and control to the risk in your unstructured data, meeting the needs of your three lines of defence risk management framework. It provides knowledge and insight into the largest portion of your data estate, introducing a consistent, automated, governance and compliance solution, providing quantifiable reports instantly and over time.

Regulatory Compliance Features

- Real-time regulatory risk score for unstructured data, tracked over time
- Unique risk score determined in line with regulatory and information governance requirements
- Application of compliance policies to mitigate against risk
- Ability to report and manage risk from interactive regulatory compliance dashboards

Data Analysis and Insights

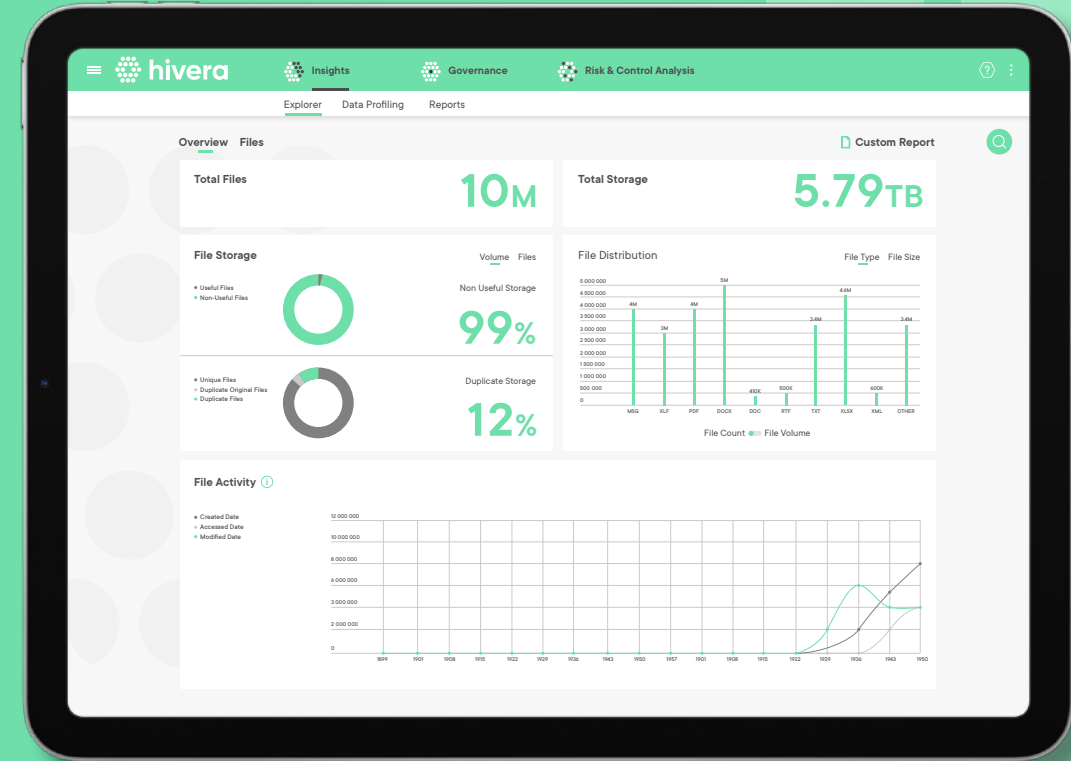

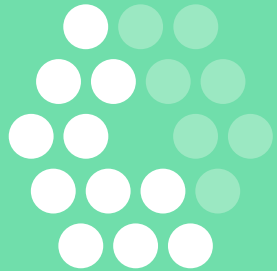

hivera provides a real-time view of your entire unstructured data estate, giving insight and understanding against the standards and regulations with which you are required to comply.

With advanced discovery capabilities, using content level analysis, hivera delivers accurate visibility and insight into a firm's entire unstructured data estate. Using keyword and pattern matching, hivera can map regulations, business processes and legal hold statuses to information wherever it sits - emails, file shares, legacy platforms, EDRM solutions or other line of business applications.

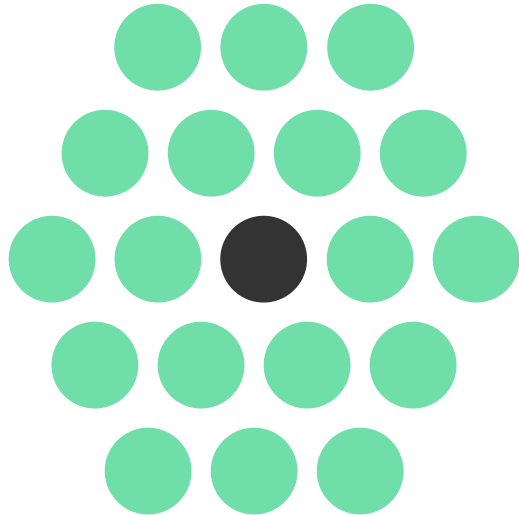

hivera provides single point of view of a complex data estate enabling complete knowledge and understanding of what data a firm is holding, where it is and whether it is compliant with regulatory requirements. Provided with these actionable insights, firms can then take steps to mitigate risk and enhance data quality within their organisation.

Data Analysis and Insights Features

- Single view of entire unstructured data estate
- Analysis using keyword and pattern matching
- Data Mapping against regulations, business processes and legal hold statuses
- Deletion of low value and duplicate data

Data Privacy

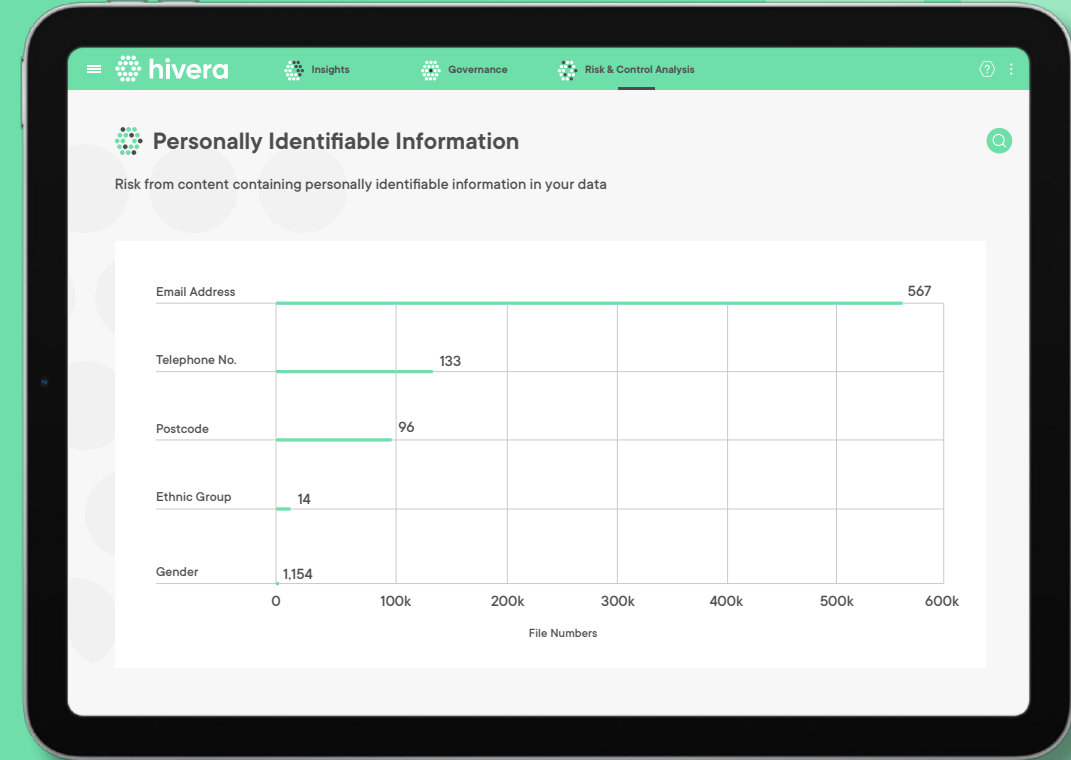

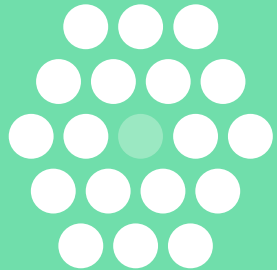

hivera automatically identifies and protects personal data within your unstructured data at pace and with maximum accuracy, ensuring proactive control and risk prevention.

Protecting personal data goes beyond complying with legislation and regulations; it is about doing the right thing for the right reason. Discovering and protecting personal data amongst unstructured sources is a growing challenge as information is stored and moves across multiple different platforms. Using deep content analysis, hivera can identify personal information wherever it is stored and automatically alert on data privacy issues against the regulations (GDPR, CCPA, DPA, etc.).

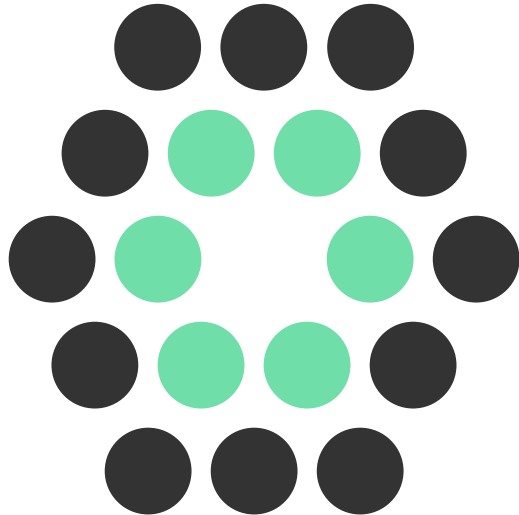

hivera not only helps firms find personal information which relates to individuals, it also helps them manage their growing data privacy challenges by efficiently mapping their data estate to regulatory requirements and information governance policies. Visibility of data enables firms to adopt a more proactive and preventive approach to data privacy, moving away from reactive and remedial responses to provide a strong risk based approach.

Data Privacy Features

- Deep content level analysis to find and report on sensitive personal data for remediation
- Proactive control through automatic identification and protection of personal data
- Identification and flagging of high risk personal data in breach of regulation

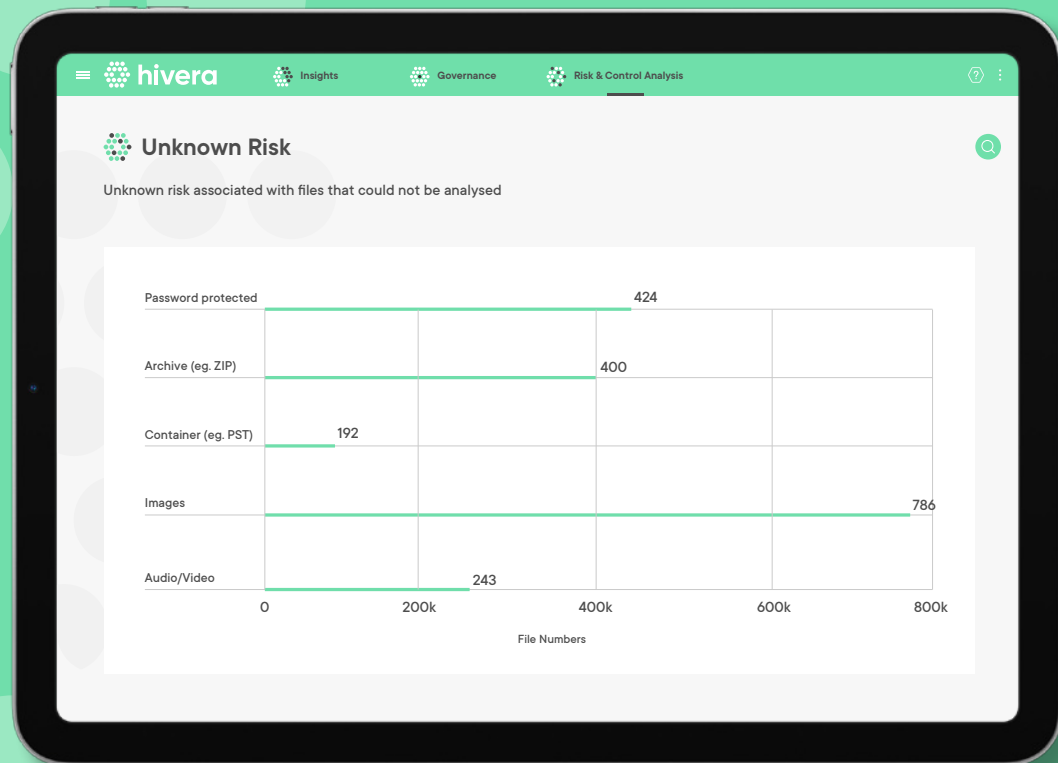

Data Protection

hivera automates the security controls around your unstructured data, identifying data in breach of your information governance policy and automating the application of data classifications.

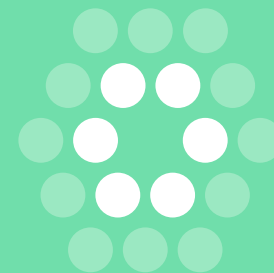

As unstructured data estates grow and become more siloed and complex to manage, the risk of exposure and loss increases significantly. hivera ensures that all information is protected in a way that is consistent and in line with regulatory requirements. Through accurate metadata and content level analysis, hivera can identify high risk points and put in place classifications and policies to facilitate ongoing controls and reduce that risk.

By delivering a secure and managed data estate hivera is enabling firms to open up the information they hold for value creation and improved collaboration. Understanding the purpose of data and through the application of automated defensible disposition, hivera creates confidence in the use of data and supports a culture of data democracy.

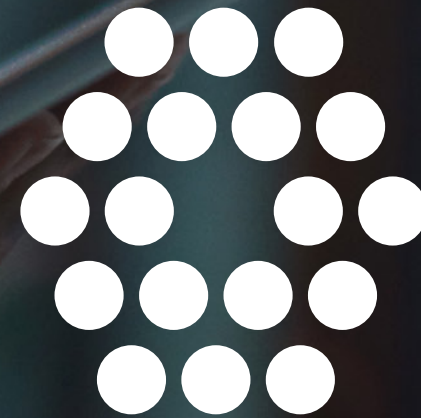

Data Protection Features

- Identification of data in breach of your information governance policy and related/applicable regulations
- Automatic application of data governance policies
- Facilitation of Defensible Disposition
- Notification and alerts created for data which falls outside appropriate storage locations
